#### **DETAILED ACTION**

# Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

# **Drawings**

2. The drawings are objected to because the figures should include word labels of the elements to more clearly describe what is included. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Application/Control Number: 09/785,581

Art Unit: 2186

# Specification

Page 3

3. The abstract of the disclosure is objected to because "Figure 2" in the final line should be removed. Correction is required. See MPEP § 608.01(b).

# Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1 and 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Korst et al. (US Patent # 6,477,541).
- 6. With respect to claims 1 and 9-11, Korst et al. disclose a system for periodically fetching blocks of data from a storage medium and supplying the blocks in the form of streams, wherein the blocks of data are fetched from a file comprising logically successive clusters, a cluster having a cluster size C and having physically successive storage sectors for holding/storing the data, the system comprising: admission control means for controlling the admission of a new stream having a maximum bit rate  $c^{max}$ , and read/write means for in a period of maximum duration P fetching blocks of data from the storage medium for respective ones of the streams, wherein the admission control means is arranged: to determine a minimal block size  $B_{lower}$  for the blocks for the new stream whereby a block of size  $B_{lower}$  is sufficiently large to sustain consumption at rate  $c^{max}$  during a period of length P, to determine the number of times k a block

Application/Control Number: 09/785,581

Art Unit: 2186

Page 4

of size B<sub>lower</sub> fits in the cluster of size C, and to determine for k blocks to be used for reading/writing the cluster a respective block size by evenly partitioning the cluster size C into the k block sizes so as to arrange that the cluster can be completely read/written by means of the k blocks, by teaching in column 2, lines 10+, that a block must contain enough data for a user to consume at a maximum rate during the period of a worst-case sweep. The size of a block of each of the streams must therefore at least be equal to the product of the maximum duration of the sweep and the maximum consumption rate of the respective stream. The duration of a sweep is determined by the actual blocks to be fetched, since each block requires a switch time for locating the block on the disk and a transfer time for actually reading the block from the disk at a given transfer rate.

# Allowable Subject Matter

7. Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew D. Anderson whose telephone number is (571) 272-4177. The examiner can normally be reached on Monday-Friday, 2nd Fridays off.

Application/Control Number: 09/785,581 Page 5

Art Unit: 2186

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew M. Kim can be reached on (571) 272-4182. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
